

## PFEA / PFEB DFAA / DFEB

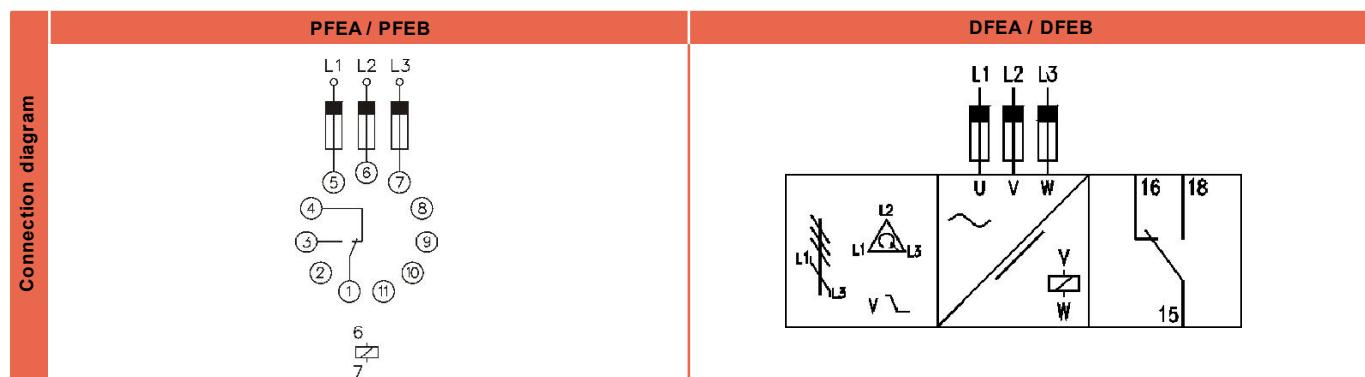

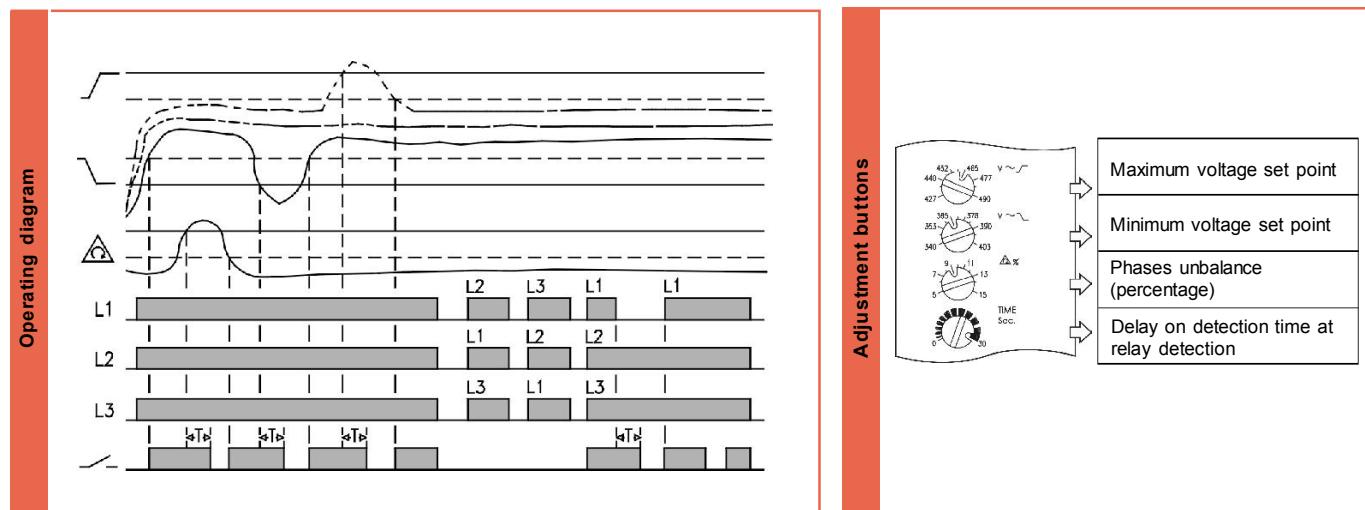

### PHASE RELAY

Difference	Control of phase succession, voltage fault, threshold, unbalance and rotation angle. Three-phase lines without neutral.
Connection	The three-phase line is connected to terminals 5, 6 and 7 (PFEA/B) or L1, L2 and L3 (DFAA/B) in the order indicated in the connection diagram.
Operating principle	While there is no anomaly the relay remains operated, and it releases for any of the following causes: . If the phase voltage is not correct. . If one or more phases are not present. . If the voltage in whichever of the phases does not stay between the adjusted margins. . If rotation angle does not stay between the adjusted margins.
Leds indication	Power on: Green Relay on: Red
Delay on connection	No
Delay on detection	Adjustable from 0 to 30 Sec.
Regulation margins	±18% nominal value.
